

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001).

There are a number of reasons for this increase. One of the main reasons is the increase in the world population. The world population has increased from 5 billion in 1987 to 6 billion in 2000, and is projected to reach 9 billion by 2050 (FAO 2001).

Another reason is the increase in the number of people who are living in poverty. The number of people living on less than \$1 per day has increased from 1 billion in 1987 to 1.5 billion in 2000 (FAO 2001).

A third reason is the increase in the number of people who are living in rural areas. The number of people living in rural areas has increased from 3 billion in 1987 to 4 billion in 2000 (FAO 2001).

There are a number of factors that contribute to the increase in the number of people who are undernourished. These factors include:

• The increase in the world population.

• The increase in the number of people who are living in poverty.

• The increase in the number of people who are living in rural areas.

There are a number of ways in which we can reduce the number of people who are undernourished. These ways include:

• Reducing the world population.

• Reducing the number of people who are living in poverty.

• Reducing the number of people who are living in rural areas.

There are a number of reasons why we should care about the number of people who are undernourished. These reasons include:

• The number of people who are undernourished is a measure of the quality of life in a country.

• The number of people who are undernourished is a measure of the economic development of a country.

• The number of people who are undernourished is a measure of the social justice in a country.

There are a number of ways in which we can improve the quality of life in a country. These ways include:

• Reducing the number of people who are undernourished.

• Reducing the number of people who are living in poverty.

• Reducing the number of people who are living in rural areas.

There are a number of ways in which we can improve the economic development of a country. These ways include:

• Reducing the number of people who are undernourished.

• Reducing the number of people who are living in rural areas.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001).

There are a number of reasons for this increase. One of the main reasons is the increase in the world population. The world population has increased from 5 billion in 1987 to 6 billion in 2000, and is projected to reach 9 billion by 2050 (FAO 2001).

Another reason is the increase in the number of people who are living in poverty. The number of people living on less than \$1 per day has increased from 1 billion in 1987 to 1.5 billion in 2000 (FAO 2001).

A third reason is the increase in the number of people who are living in rural areas. The number of people living in rural areas has increased from 3 billion in 1987 to 4 billion in 2000 (FAO 2001).

There are a number of factors that contribute to the increase in the number of people who are undernourished. These factors include:

1. The increase in the world population.

2. The increase in the number of people who are living in poverty.

3. The increase in the number of people who are living in rural areas.

4. The increase in the number of people who are living in areas of conflict.

5. The increase in the number of people who are living in areas of natural disaster.

6. The increase in the number of people who are living in areas of environmental degradation.

7. The increase in the number of people who are living in areas of political instability.

8. The increase in the number of people who are living in areas of social inequality.

9. The increase in the number of people who are living in areas of poor governance.

10. The increase in the number of people who are living in areas of poor infrastructure.

11. The increase in the number of people who are living in areas of poor education.

12. The increase in the number of people who are living in areas of poor health care.

13. The increase in the number of people who are living in areas of poor housing.

14. The increase in the number of people who are living in areas of poor water supply.

15. The increase in the number of people who are living in areas of poor sanitation.

16. The increase in the number of people who are living in areas of poor food security.

17. The increase in the number of people who are living in areas of poor nutrition.

18. The increase in the number of people who are living in areas of poor access to services.

the 1990s, the number of people with a mental health problem has increased in the UK. The prevalence of mental health problems has increased from 10% in 1990 to 15% in 2000 (Mental Health Foundation, 2002). The prevalence of mental health problems has also increased in other countries (Mental Health Foundation, 2002).

The prevalence of mental health problems has increased in the UK because of a number of factors. One of the main factors is the increase in the number of people with a mental health problem who are not receiving treatment. This is because of a number of reasons, including a lack of resources, a lack of awareness of mental health problems, and a lack of support for people with a mental health problem.

Another factor is the increase in the number of people with a mental health problem who are not seeking treatment. This is because of a number of reasons, including a lack of awareness of mental health problems, a lack of support for people with a mental health problem, and a lack of resources.

The prevalence of mental health problems has also increased because of a number of other factors, including a lack of resources, a lack of awareness of mental health problems, and a lack of support for people with a mental health problem.

The prevalence of mental health problems has also increased because of a number of other factors, including a lack of resources, a lack of awareness of mental health problems, and a lack of support for people with a mental health problem.

The prevalence of mental health problems has also increased because of a number of other factors, including a lack of resources, a lack of awareness of mental health problems, and a lack of support for people with a mental health problem.

the 1990s, the number of people with a mental health problem has increased in the UK (Mental Health Act 1983, 1990).

There is a growing awareness of the need to improve the lives of people with mental health problems. The Department of Health (1999) has set out a vision of a new mental health system, which will be based on the following principles:

- (i) People with mental health problems should be treated as individuals, with their own needs and wishes.
- (ii) People with mental health problems should be treated as citizens, with the same rights and responsibilities as everyone else.
- (iii) People with mental health problems should be treated as partners in their own care.

There is a growing emphasis on the need to improve the lives of people with mental health problems, and to ensure that they are treated as individuals, with their own needs and wishes.

The Department of Health (1999) has set out a vision of a new mental health system, which will be based on the following principles:

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.3 billion. The number of people aged 15 years and over has increased from 3.5 billion to 4.5 billion. The number of people aged 65 years and over has increased from 0.2 billion to 0.5 billion.

There are a number of reasons why the world population is increasing. One of the main reasons is that the number of people who are surviving to old age is increasing. This is due to a number of factors, including improved medical care, better nutrition, and a decline in the death rate.

Another reason why the world population is increasing is that the number of people who are having children is increasing. This is due to a number of factors, including a decline in the death rate, a decline in the age at which people are having children, and a decline in the number of children who are dying.

The world population is increasing at a rapid rate. This is a cause for concern because it will have a number of negative effects on the environment and on the quality of life. It will also have a number of positive effects, including a decline in the death rate and a decline in the age at which people are having children.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.3 billion. The number of people aged 15 years and over has increased from 3.5 billion to 4.5 billion. The number of people aged 65 years and over has increased from 0.2 billion to 0.5 billion.

There are a number of reasons for the increase in the number of people in the world. One of the main reasons is the increase in the number of people who are surviving to old age. This is due to a number of factors, including improvements in medical care, better nutrition, and a decline in the number of people who are dying from infectious diseases.

Another reason for the increase in the number of people in the world is the increase in the number of people who are having children. This is due to a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are having abortions, and a decline in the number of people who are using contraception.

The increase in the number of people in the world has a number of implications. One of the main implications is the increase in the number of people who are dependent on others. This is due to the increase in the number of people who are aged 65 years and over, and the increase in the number of people who are disabled.

Another implication of the increase in the number of people in the world is the increase in the number of people who are living in poverty. This is due to a number of factors, including a decline in the number of people who are working, a decline in the number of people who are receiving social security benefits, and a decline in the number of people who are receiving other forms of social assistance.

The increase in the number of people in the world has also led to a number of other problems, including a decline in the number of people who are receiving education, a decline in the number of people who are receiving health care, and a decline in the number of people who are receiving other forms of social assistance.

There are a number of ways in which the increase in the number of people in the world can be addressed. One of the main ways is to improve the number of people who are surviving to old age. This can be done by improving medical care, better nutrition, and a decline in the number of people who are dying from infectious diseases.

Another way to address the increase in the number of people in the world is to reduce the number of people who are having children. This can be done by a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are having abortions, and a decline in the number of people who are using contraception.

The increase in the number of people in the world is a complex problem that requires a number of different solutions. It is important to continue to work on these issues in order to address the challenges that the world is facing.
